SD Card Slot	Support up to 2TB SDXC
Micro Port	Charge the FileHub
USB A Port	Support USB flash and HDD drive data transfer (FAT32, exFAT, NTFS) Provide 1A output current to compatible devices
RJ45 Ethernet Port	Connect to your existing router/modem to set the FileHub to AP/Bridge/Router modes.

Features at a Glance

Wireless Sharing

- Share files from the attached USB storage to smartphones, tablets, or other devices that are connect to the FileHub
- Share files from a USB Hub with up to 4 USB flash drives
- Connect Google Chrome cast to your FileHub and play videos and music on your connected USB storage through Chrome cast to the big screen.

One Key Backup

- Upload your SD card-stored photos to your hard disk or flash drive easily.

Travel Router

- AP Mode: Plug in an Ethernet cable and it will take a wired signal and turn it wireless
- Bridge Mode: Never pay for multiple network connections, use the FileHub to connect and share connections
- Router Mode: When connected to a DSL or cable modem, it works as a regular router.

External Battery Pack

- 6700 mAh external battery charger capable of charging most smartphones 1-2 times.

5G Hz

- Upgraded 300Mbps Wi-Fi speed on 2.4GHz band and up to 433 Mbps on 5GHz. Instantly convert a wired network to wireless network. And bridge and extend WiFi, share internet securely with others. (Not a Hotspot)
Notice: 5GHz mode only support 5G router or 5G wifi when you connect with ethernet.

In-app Camera

Use the in-app camera to save photos and videos directly to SD card via RAV FileHub so you can free up your phone's memory for other things. (your phone must be connect with the wifi of FileHub and make sure the transmission distance is less than 10M/32.8 feet.)

Configure the FileHub

Connection

The FileHub RP-WD009 can create a local wireless network (without internet access). Central functions are performed through the local network. To connect the FileHub wirelessly, please follow the steps below:

Note: Example below shows Android OS

1. Press the power button for 3 seconds to turn on the device. Wait for the Wi-Fi indicator to be ready.

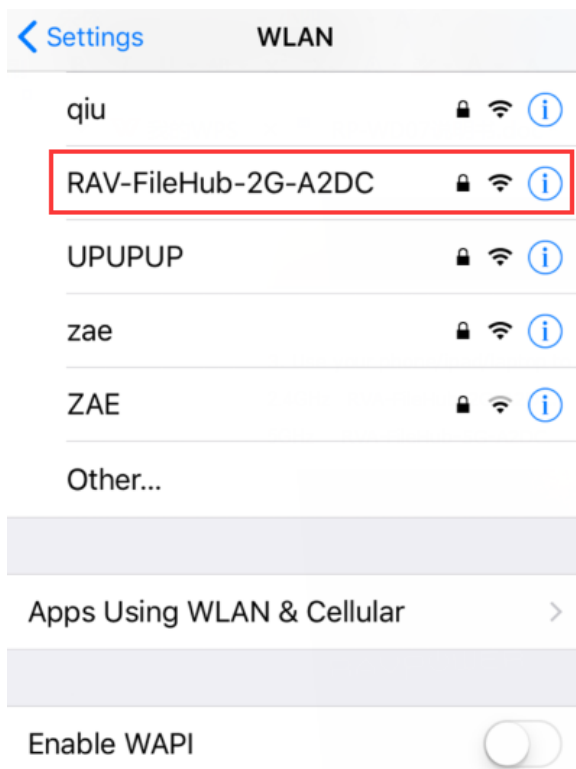

Click **Settings** on your phone.

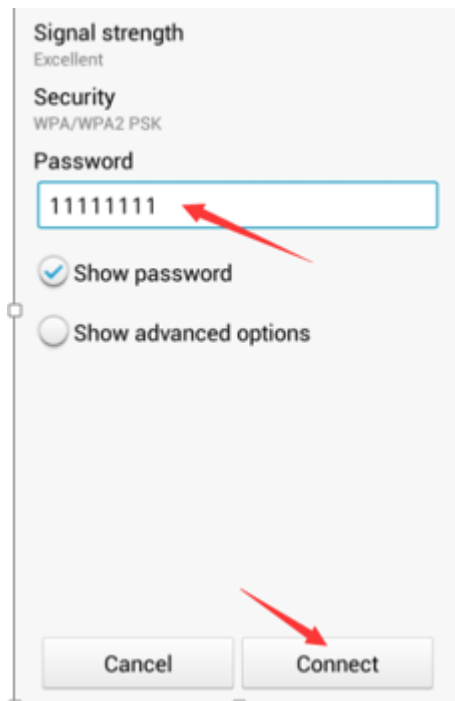

2. Click **WLAN** and open the Wi-Fi.

3. Select RAV-FileHub-2G-A2DC.

4. Enter the default password: 11111111, and click **Connect**.

The image shows a Wi-Fi connection dialog box. At the top, it displays 'Signal strength' as 'Excellent'. Below that, 'Security' is listed as 'WPA/WPA2 PSK'. The 'Password' field is highlighted with a blue border and contains the text '11111111'. A red arrow points to the password field. Below the password field, there are two radio buttons: 'Show password' (which is selected with a blue checkmark) and 'Show advanced options'. At the bottom of the dialog, there are two buttons: 'Cancel' and 'Connect'. A red arrow points to the 'Connect' button.

🔗 The same process applies for iPhone and other Smartphones when connecting the FileHub to local Wi-Fi.

5. Open **Browser**, enter **10.10.10.254** in the URL box.

10.10.10.254

RAVPower filehub

Log In

6. Log in with default user name: **admin**, no password by default.

7. Then you will be prompted to the Setup Wizard.

The wizard only helps you to connect your FileHub to the Internet. To

get more usage, please visit [!\[\]\(0f848bbd71cef6b345273b16f905912a_img.jpg\) 24](#) to get the full guide.

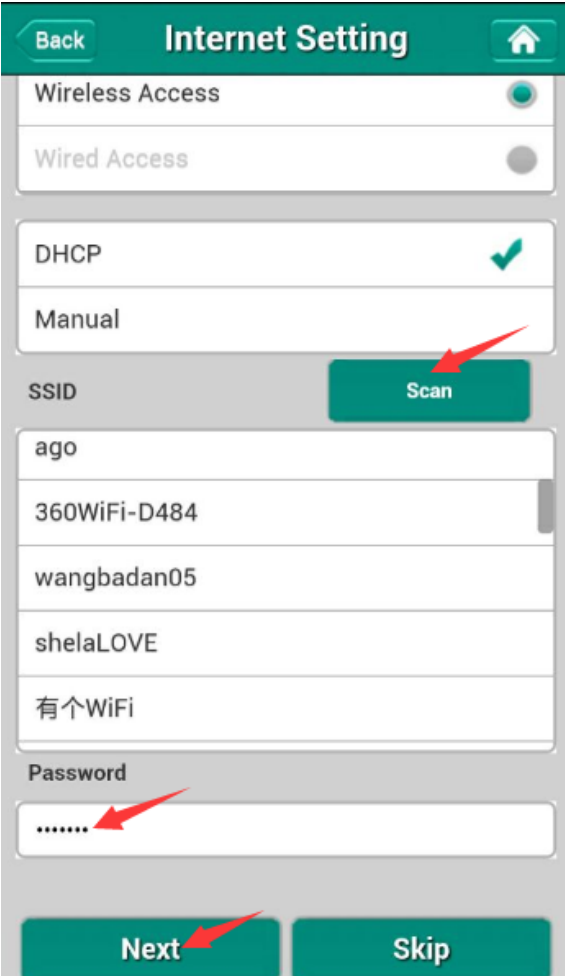

8. Click **Next** and set up the Internet connection on this page.

(Please click [!\[\]\(de95854c7ee024cfadc48187bbb781b2_img.jpg\) 31](#) to get all modes for wired/wireless access)

9. Click **Scan** to search for available Wi-Fi connections. Select your Wi-Fi

and enter the password.

The screenshot shows the 'Internet Setting' screen. At the top, there is a 'Back' button and a home icon. Below this, there are two options: 'Wireless Access' (which is selected with a blue dot) and 'Wired Access' (which is unselected with a grey dot). Under 'Wireless Access', there are two sub-options: 'DHCP' (selected with a green checkmark) and 'Manual'. Below these, there is a 'SSID' section with a 'Scan' button. A list of SSIDs is shown: 'ago', '360WiFi-D484', 'wangbadan05', 'shelaLOVE', and '有个WiFi'. Below the SSID list is a 'Password' section with a text input field containing six dots. At the bottom, there are two buttons: 'Next' and 'Skip'. Red arrows point to the 'Scan' button, the 'Password' input field, and the 'Next' button.

10. Click **Next**, then you can change the default FileHub Wi-Fi SSID and password to what you want.

To get more information about the Wi-Fi & LAN settings, please click

Back Wi-Fi & LAN

Hide SSID ☐ ON ☒ OFF

11. Click **Next** and then you can change the password of the admin account.

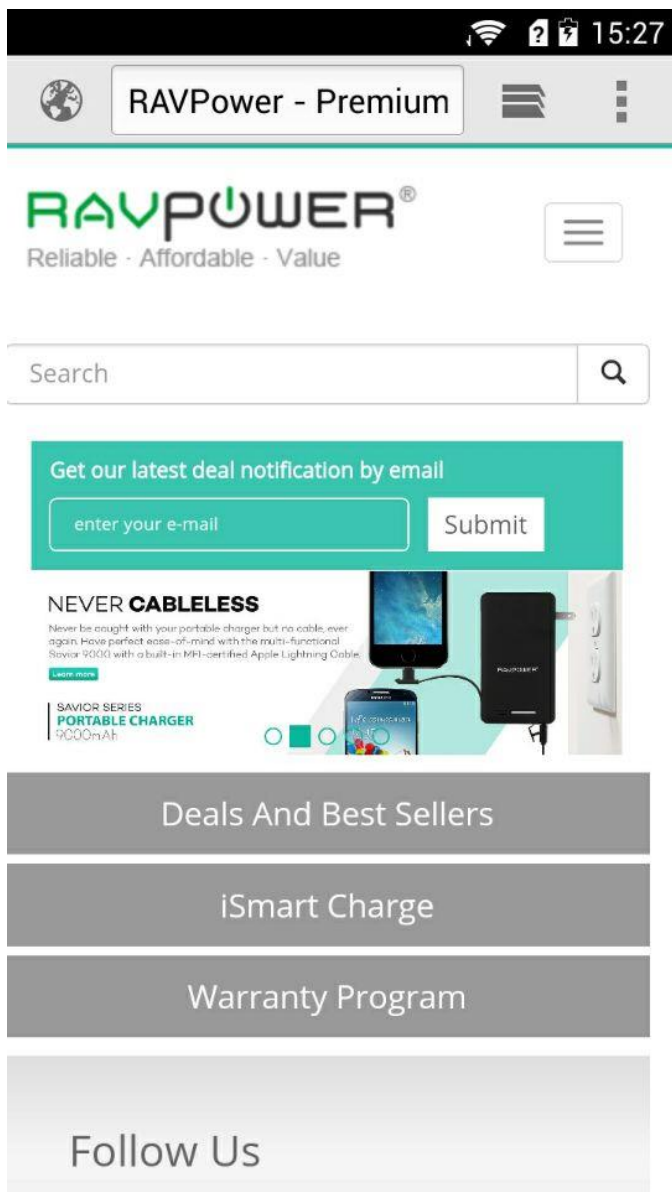

12. Click **Next**, you will then be prompted to wait 2 minutes while the system reboots. After the system has successfully rebooted, please reconnect to the FileHub wirelessly. Your FileHub will now connect to the Internet.

 The Wi-Fi LED indicator will turn to green.

 If you change the SSID and password of the FileHub, you may need to forget the password of the FileHub from your phone first.  [76](#)

More FileHub Features

ONE KEY BACK UP (USB transfer)

1) How to one key backup

1. Turn on our RP-WD009 .
2. Plug into your flash drive/Hard drive and SD card. Wait until the “SD” LED light will not flash. (Identify the device ready) .
3. When the LED light is not flash please keep press the button “ SD»usb ” about 5 seconds until the LED light is flash again.(Now RP-WD009 is reading your SD card.)
4. Wait until the “SD” LED light is no longer flashing then one key backup is completed.
5. Now you can check your backup file “SD backup” in your flash drive/hard drive via our APP RAV FileHub .
6. Your original file in your flash drive/hard drive will not be deleted.

2) Files Management after Backup

Via app

- 1) Click File Management
- 2) Find your SD card-volume
- 3) Select the picture you want to delete.

Access 10.10.10.254 via your browser

- 1) Log into 10.10.10.254
- 2) Click Explorer
- 3) Find SD Card-Volume1

- 4) Select the picture you want to delete
- 5) Click the WRENCH on the top right, then you can rename/cut/delete/copy/create Folder your photos.

3) NOTICE

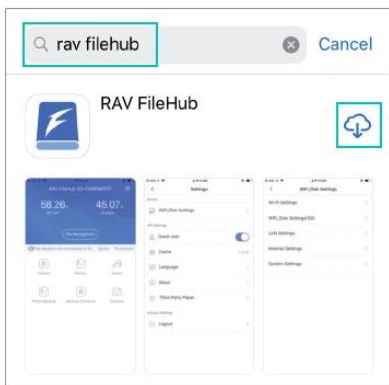

Please Pull out THE HARD DRIVE from device WHEN NOT IN USE otherwise RP-WD009 will still provide power to an external drive and use electricity

Wireless Storage

1) Download the APP

You can create your own wireless personal media sharing center.

 Download the "RAV FileHub " app from the Apple App Store or Google Play first. You may also download it from the RAVPower website: www.RAVPower.com

Example: Android

1. Insert a USB thumb drive, a card reader (up to 64GB), or a USB HDD (supported formats: NTFS/FAT16/FAT32, up to 4TB) into the USB port of the FileHub, then switch on the FileHub.

RP-WD009 supports a USB hub with up to 4 USB devices (2 hard disks max)

2. Download the app **RAV FileHub** from Google Play to your Android phone.
3. Connect your phone to the FileHub wirelessly.
4. Run the **RAV FileHub** app.

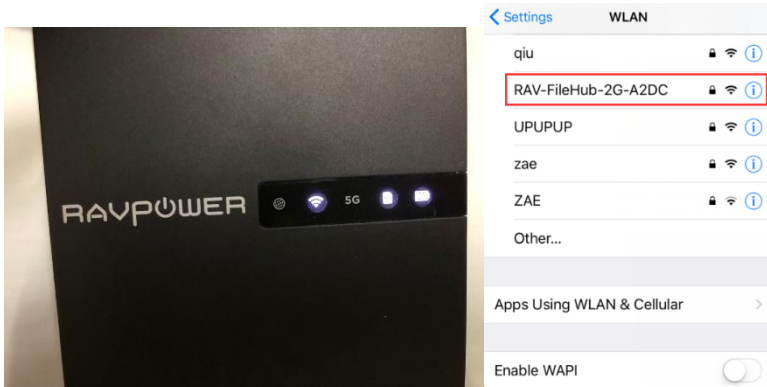

Also you can access the USB storage via the admin web end 10.10.10.254 ( [58](#)). To get full use of wireless sharing, please download the **RAV FileHub** app.

2) Connect the Wifi of RP-WD009

2.4GHz MODE

Please keep press the Wifi button on the left side until the Wifi LED light is on, then you can use your phone to connect the Wifi

RVA-FileHub-2G-A2DC.

5GHz MODE

Please keep press the Wifi button on the left side until the 5G LED light is on, then you can use your phone to connect the Wifi RVA-FileHub-5G-XXXX.

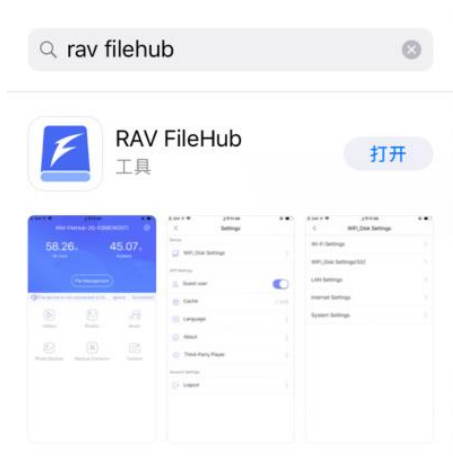

Or you can turn on both 2.4GHz and 5GHz MODE

3) Storage via APP

- 1) Use your phone/ipad download our app “RAV FileHub”.
- 2) Turn on RP-WD009, and plug into your SD card and flash drive/Hard drive, make sure the LED light of SD card and Wifi is turn on and stable.

- 3) Use your phone/Ipad/laptop to connect the Wifi of Filehub, (or the device will show device is not connected)
- 2.4 GHz RVA-FileHub-2G-A2DC.
- 5 GHz RVA-FileHub-5G-A2DC.

4) Keep press the file you want to transfer and then you will see “cope to” “delete” “share” “more”(Move to, Rename).

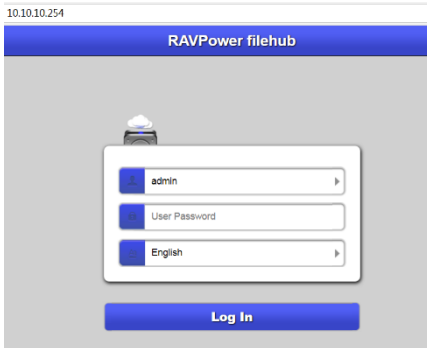

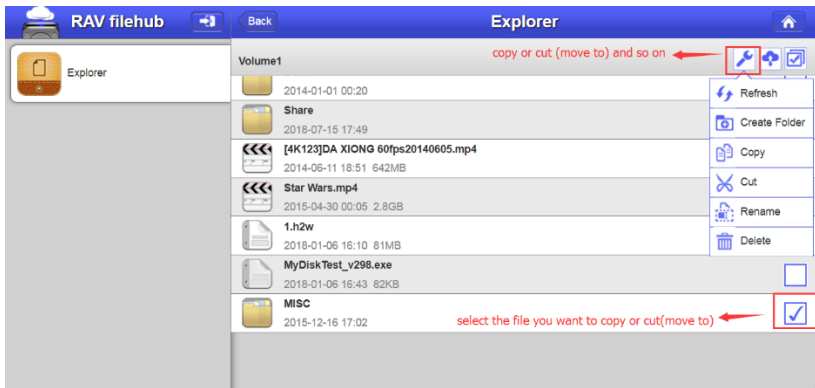

5. Now you can cope or move your file on SD card, flash drive/Hard drive

4) Storage Via 10.10.10.254

1) Please connect the wifi of RP-WD009, 2.4 GHz RVA-FileHub-2G-A2DC or 5GHz RVA-FileHub-5G-A2DC.

- 2) Access 10.10.10.254 via your browser. Login with the default user name “admin” and leave the password field empty. (The username and password are the same as the key you use to login to the admin configuration page 10.10.10.254).
- 3) Click Explorer and select the file you want to move or cut.

5) NOTICE

- 1). Your phone/ipad/laptop must be connect with the wifi of FileHub and make sure the transmission distance is less than 10M/32. 8 feet.
- 2) Due to the limitation of the Apple iOS system, you can ONLY access the Photos folder on your iPad/iPhone; Filehub is currently unable to sync with media files stored in iTunes to USB storage devices due to digital rights management (DRM).
- 3) Please UNPLUG THE HARD DRIVE WHEN NOT IN USE or it will still provide power to an attached drive and use a lot of electricity.
- 4) You need to connect network if you want to share the file.

If you need specific instructions for the **RAV FileHub** app, please refer to the instructions listed on the RAVPower website www.RAVPower.com

Travel Router

 Similar settings can also be performed on any Mac, or on mobile devices such as phone, tablet, etc.

Access Point Mode

Example: Android

 FileHub will automatically become an access point once you:

1. Power on the FileHub.
 2. Plug a network cable from a **well-established router** to the FileHub, and wait for the blue Wi-Fi indicator light to stop flashing and remain steady.
 3. Connect your phone to the FileHub wirelessly.
- After this the FileHub will connect to the Internet.

 No need to change any parameters once it becomes an Access Point.

Router Mode

The FileHub connects to a DSL or cable modem and turns it into a regular wireless router.

Example: Android

1. Power on the FileHub.
2. Plug an Ethernet cable from a **a well-established modem** to the FileHub.
3. Connect phone to the FileHub wirelessly.
4. Login 10.10.10.254.

5. Click **Settings**, then select **Network Settings**.

6. Select **Internet**, choose **Wired Access**.

 The FileHub provides Dynamic IP, Static IP and PPPoE for router setup.

Please consult with the network administrator or refer to the wired network user documentation for best selection.

If using **DSL** Internet, please enter the **PPPoE** username and password and click **Save**.

Example:

FileHub Plus

Save

The FileHub will now connect to the Internet.

If a static IP address has not been issued by the network provider please request the information from the network provider. The given static IP fields (including network mask and gateway) must also be set to the router. Click **Save**.

The screenshot shows a mobile application interface for configuring internet settings. At the top, there's a green header with 'Internet' in the center, a 'Back' button on the left, and a home icon on the right. Below the header, there's a section for 'PPPoE' and a section for 'Static IP' which is currently selected, indicated by a green checkmark. Below this, there's a section for 'Dynamic IP'. Further down, there's a section for 'IP Address' which contains four input fields: 'IP Address' (192.168.1.107), 'Subnet Mask' (255.255.255.0), 'Gateway' (192.168.1.1), and 'Primary DNS' (192.168.1.1). Below these is a 'Second DNS' field which is empty. A red rectangular box highlights the 'Static IP' selection and the 'IP Address', 'Subnet Mask', and 'Gateway' input fields. At the bottom of the screen, there's a large green button labeled 'Save'.

The FileHub will now connect to the Internet.

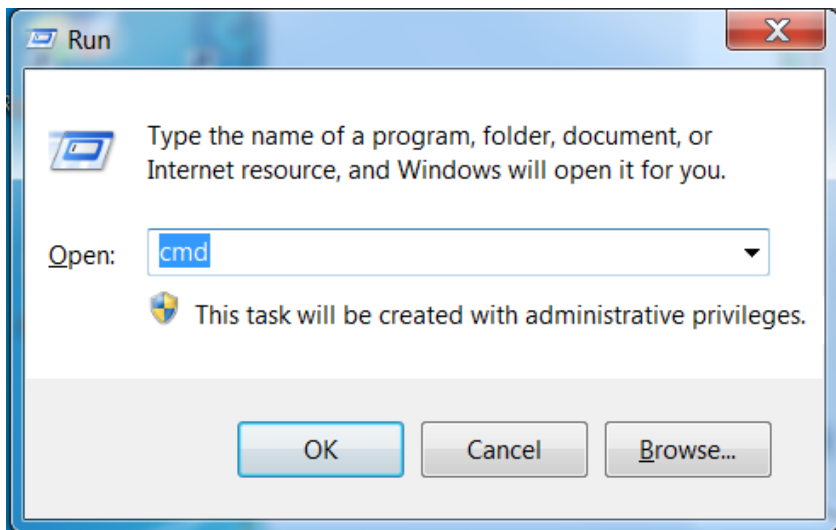

When connecting devices with a network cable, please make sure the

cable is connected securely. Loose cables are one of the most common reasons for network setup problems.

If a wired network type cannot be chosen, an alternative method is available to set up the router mode:

1. Connect the computer directly to the wired connection with an Ethernet cable.
2. Press **win+R** on the keyboard (the "win" key is located between the Ctrl and Alt buttons).

3. Enter **CMD**, a black window will pop up; enter **ipconfig**. Get the IP address, subnet mask and default gateway assigned by the router/modem.

4. Connect the FileHub to the wired connection with an Ethernet cable
5. Login 10.10.10.254
6. Click **Settings** → **Network Settings**

7. Select **Internet** , then choose **Wired Access** and **Static IP** from the drop-down list
8. Enter into the IP field the same IP information assigned by the wired network. Click **Save**

The FileHub will now connect to the Internet.

Bridge Mode

Definition: The router borrows an existing wireless Internet and broadcasts it using a different network name (SSID) and password. This application can create two individual networks for two groups of users sharing one Internet connection.

Application: Small restaurants, shops, bars, home, office or locations where Internet service needs to be provided to guests without revealing the password of the existing network.

Configuration:

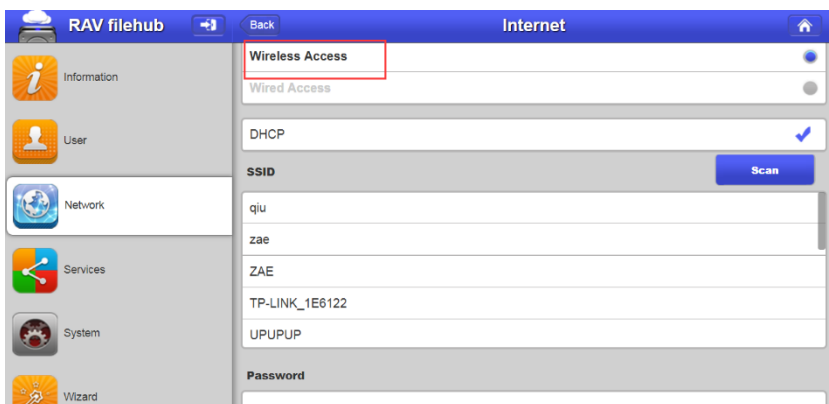

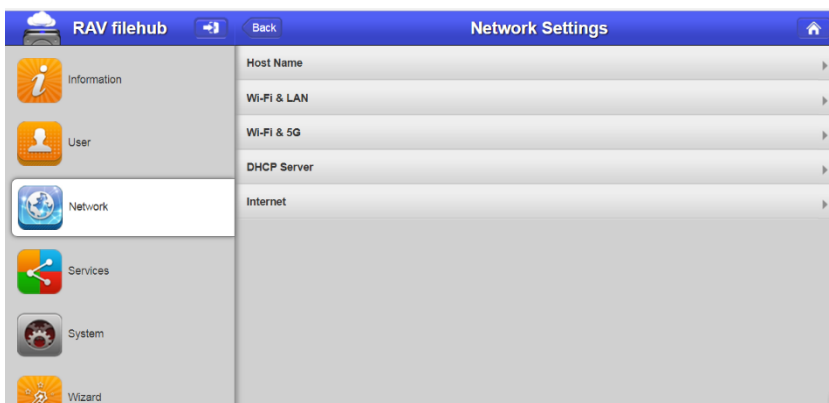

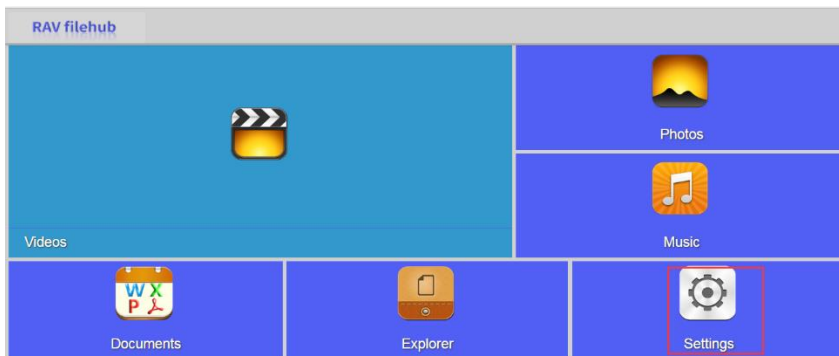

There are two configuration modes:

1. Wi-Fi is secured, which requires entering a password.
2. Wi-Fi is open, but has an authorization page.

Configuration #1:

Example: Android

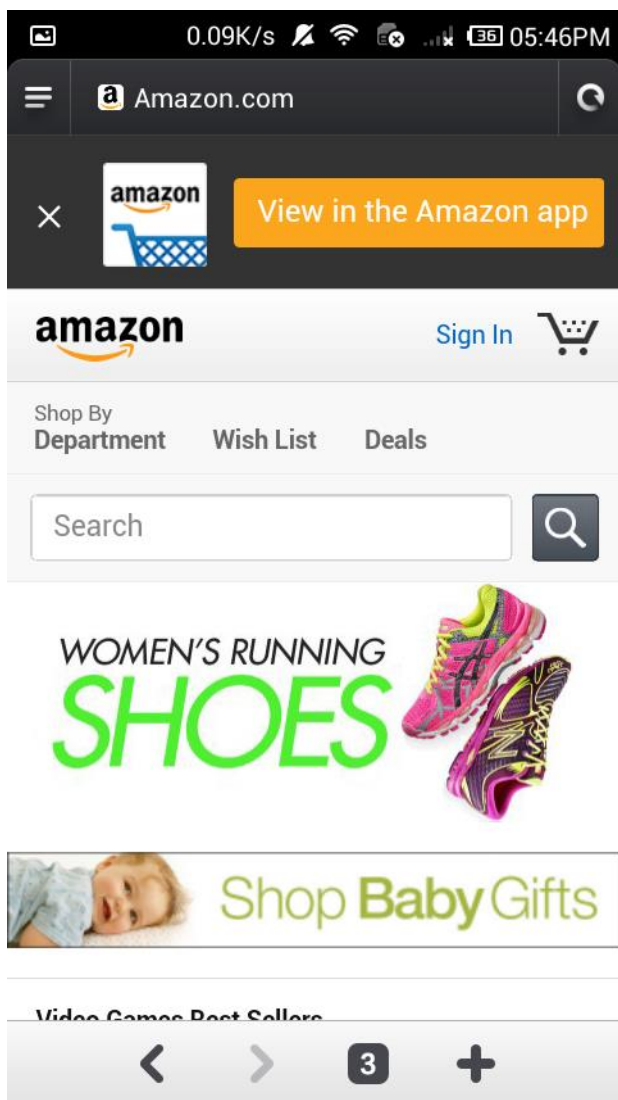

1. Turn on the FileHub
2. Connect your phone to the FileHub wirelessly
3. Open browser and log in 10.10.10.254
4. **Settings**→ **Network Settings** → **Internet**, choose **Wireless Access**, Click **Scan** to search for available Wi-Fi connections.

5. Select your wireless network (e.g. **OpenWifi**), enter the corresponding password. Click **Save**.

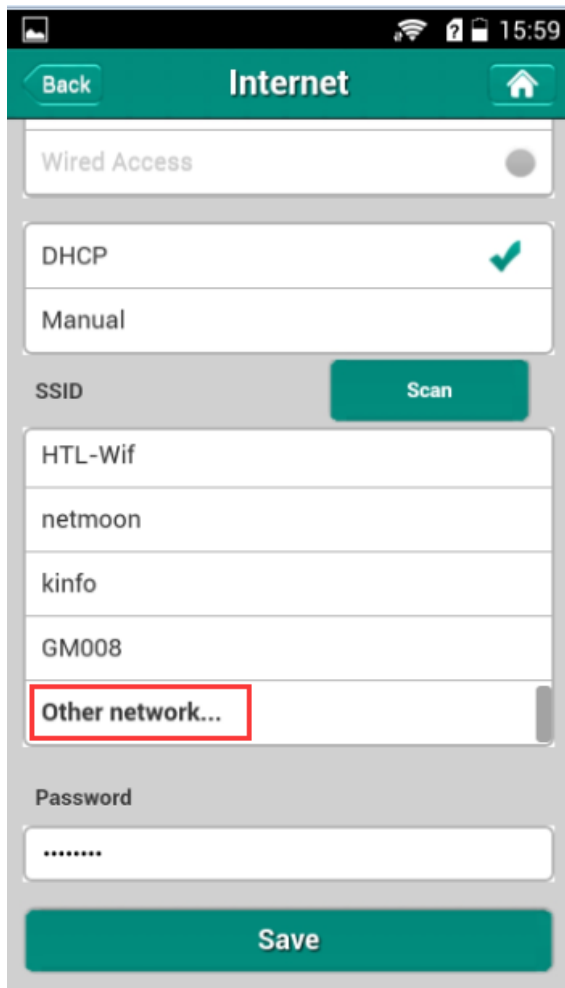

The FileHub will now connect to the Internet.

 FileHub can store the connected Wi-Fi.

 FileHub can connect to a hidden SSID.

1. Open the SSID drop-down list. Click **Other network....**

The screenshot shows the 'Internet' settings screen on a mobile device. At the top, there's a teal header with 'Back', 'Internet', and a home icon. Below the header, there's a 'Wired Access' toggle. The 'DHCP' option is selected with a green checkmark, and 'Manual' is also visible. Under the 'SSID' section, there's a 'Scan' button and a list of detected networks: 'HTL-Wif', 'netmoon', 'kinfo', 'GM008', and 'Other network...'. The 'Other network...' option is highlighted with a red rectangle. Below the SSID list is a 'Password' field with masked characters. At the bottom is a large green 'Save' button.

2. Enter the SSID and password, click **Save**. Wait a few seconds. The FileHub will connect to the hidden SSID.

The screenshot shows the 'Other network' configuration screen in the FileHub Plus app. The status bar at the top indicates a Wi-Fi connection, battery level, and the time 16:00. The app header shows 'FileHub Plus' and navigation icons. The screen has a teal header with 'Back' and 'Other network' text, and a home icon. The configuration fields are as follows:

Field	Value
SSID	IP-Cam-Test
Security	WPA- Mixed
Encryption type	AES
Password	12344321

A large teal 'Save' button is located at the bottom of the form.

Configuration #2:

The setting applies to wireless networks that need a **username** and **password** to connect or use a **Terms of Service** agreement.

1. Get the user name and password of the Wi-Fi (if necessary).
2. Connect your phone to the FileHub wirelessly.

3. Open browser and log in **10.10.10.254**.
4. **Settings**→ **Network Settings** → **Internet**, choose **Wireless Access**, click **Scan** to select the Wi-Fi, then leave the password empty, click **Save**.
5. Open another page of the browser, the authorization page will pop up, then login with the username & password

The FileHub will now connect to the Internet.

 Please clear the browser cache if the connection failed the first time and then try again.

In-app Camera

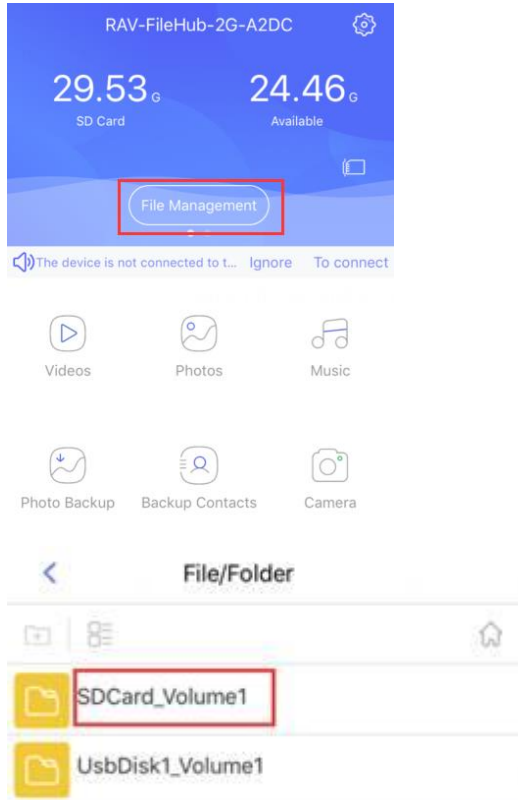

1) Save photos and videos directly to SD card via RAV FileHub
 Save photos and videos directly to SD card via RAV FileHub so you can free up your phone's memory for other things.(your phone must be connect with the wifi of FileHub and make sure the transmission distance is less than 10M/32. 8 feet.)

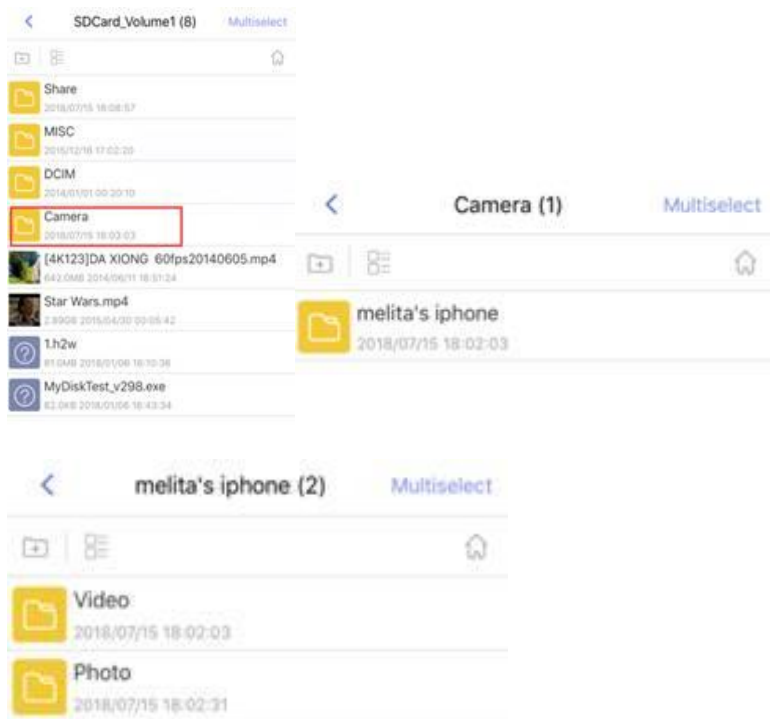

2) How to find these picture?

APP: File Management-SD Card-Camera-XXX's phone-photos/videos

10.10.10.254: Explorer-SD Card-Camera-XXX's phone-photos/videos

3)Select the

Media Streamer & Sharer

1) Share Files

Access your movies, music, and photo at home or on the road when you connect up to five different devices to the unit via local Wi-Fi network.

Make sure all device are connect with RVA-FileHub-2G-A2DC or RVA-FileHub-5G-A2DC.

When you connected the wifi of RP-WD009, then you can wireless Storage (copy or move) the file on SD card and flash drive/Hard drive to your phone which means everyone can choice the photos they love and copy it to their phone via our app when traveling. (Only support five different devices, make sure the transmission distance is less than 10M/32. 8 feet)

2) Hotel WiFi Share

1) Please connect the wifi of Filehub first and then use your device to connect local network.

And then you can use guest device to connect the wifi of Filehub.

3) Authentication wifi page setting

Via 10.10.10.254

Bridge Mode

- ask hotel front desk to get the wifi user name and password of your room

- connect your phone to Filehub, login its website 10.10.10.254

- Setting -> internet -> wireless access -> scan -> select your hotel's Wifi name (SSID), leave the password empty, save.

- Open another page on your phone browser, the hotel restrict page pops up, login with the username & password you asked from front desk

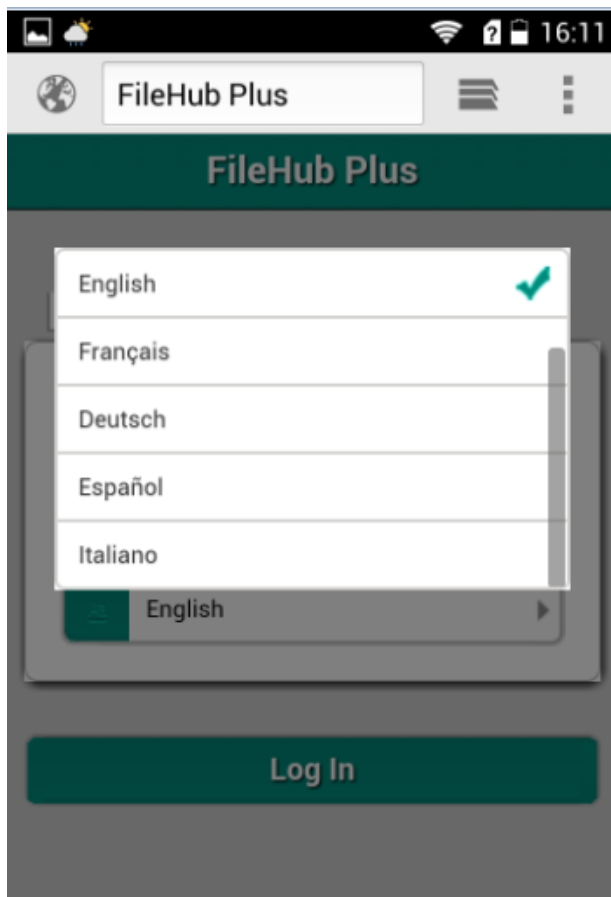

- Your RAV FileHub's mac address has been registered by hotel wifi system, then your other devices could access the network bridged by RAV FileHub.

(Clean your browser cache if it failed to connect at the first time)

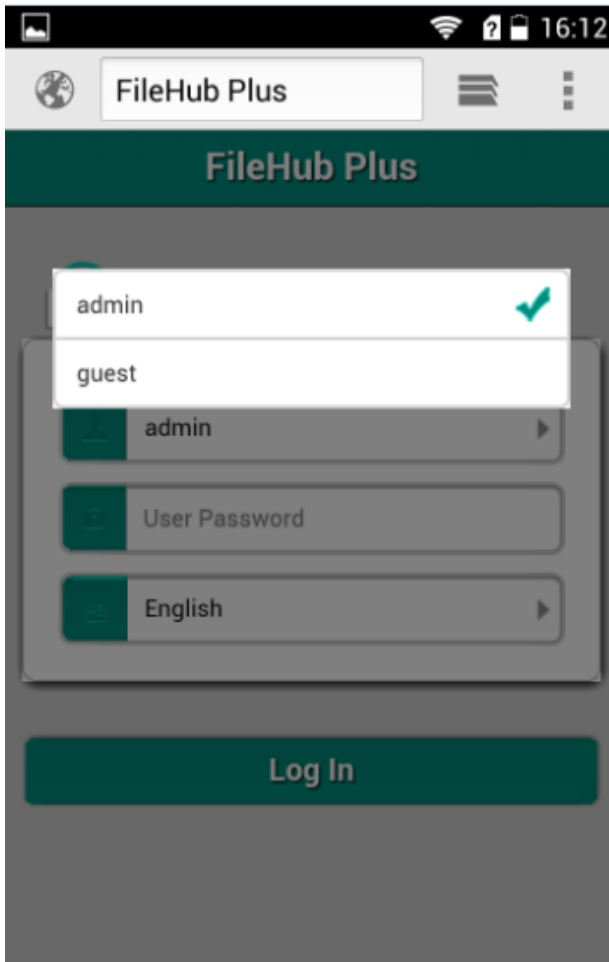

System Tools

Language

At the login page, you may change the **language**

And select the account

 Guest can only visit the content of the folder “**Share**” which is created automatically on your USB storage. You can put the files that you want others to view into this folder. The guest can edit the password of the

guest account.

📎 Videos will be downloaded to your computer then open in the player you select. If you open videos on your phone or tablet, the supported formats of your phones/tablets can be opened directly.

If your phone doesn't support the formatted video, it will be downloaded to your phone:

Here are some basic functions to manage your USB storage:

 Refresh	To refresh the display
 Create Folder	To create new folders on your external USB storage device
 Copy	To copy files and paste them into another folder
 Cut	To move files and paste them into another folder
 Rename	To rename files or folders
 Delete	To delete files
 Upload	To upload the files in your PC/Laptop to the USB external storage device
 Select All	To select all the files below
 ..	Up one level
	Stream this to your DLNA devices that are

	wirelessly connected to your FileHub
--	--------------------------------------

Information

The information of your FileHub and the USB storage device can be checked here.

Login 10.10.10.254 → **Settings** → **Information**

Click **Device** to view the FileHub information.

 **Serial Number:** Refers to which batch your FileHub belongs to. This is the same as the serial number (S/N) labeled on the bottom of your FileHub. When you have some problems with your FileHub, providing the serial number to our Tech Support will help to solve the issues.

Click **Storage** to view the information of the USB storage attached to the FileHub.

You may click **Delete** to eject your USB device.

User Settings

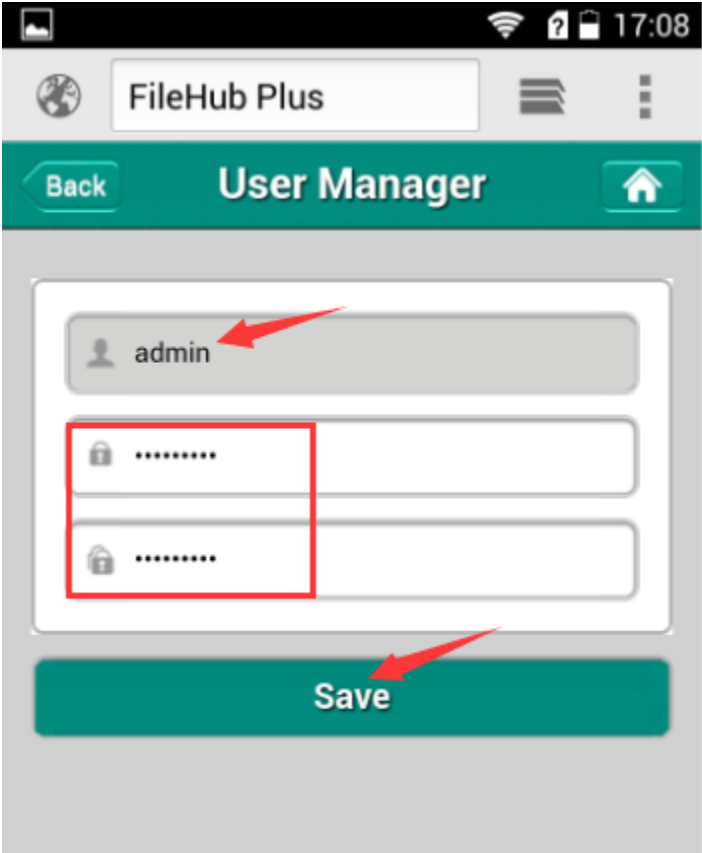

Login 10.10.10.254, **Settings** → **User Manager**

Admin

Select **Admin**. Here you can change the password of the admin account. Enter your new password, click **Save**.

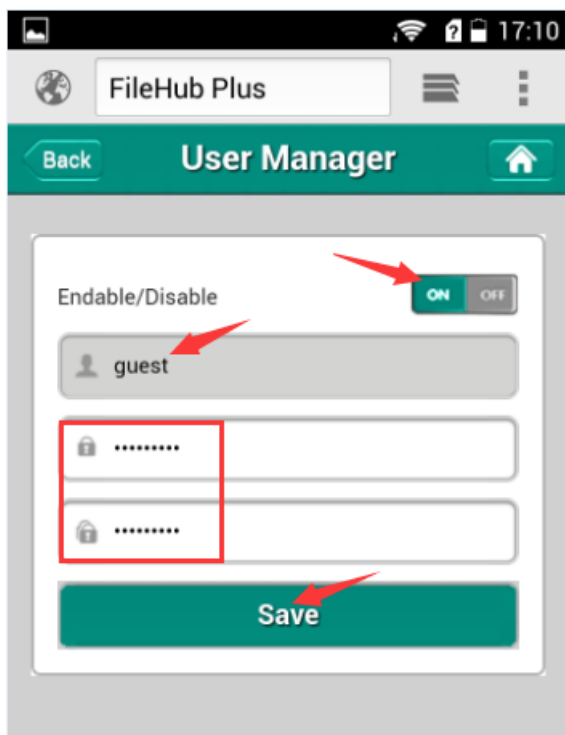

Note: If you forget the new password, you will have to reset the FileHub to factory settings to enter 10.10.10.254

Guest

Click **guest**, then click  to enable or disable the guest account. You can also set the password of the guest account here.

Network Settings

Log in 10.10.10.254, **Settings** → **Network Settings**

Network
Settings

Host Name

FileHub host name can be changed here:

Select **Host Name**, enter the new host name, click **Save**

Host Name

The image shows a mobile application screen for configuring the host name. At the top, there is a dark green header bar with a 'Back' button on the left, the title 'Host Name' in the center, and a home icon on the right. Below the header, the screen has a light gray background. A white rounded rectangle contains the text 'Host Name' followed by 'FileHub' in red. Below this, a message states: 'Host Name must begin with a letter and followed by a combination of letters, numbers, and dashes (-). The length should be 2-8 characters.' At the bottom of the screen, there is a large dark green button labeled 'Save'.

Now the host name has changed.

SSID Settings

To change the SSID name and password of FileHub, please follow the steps below:

1. Select **Wi-Fi & LAN**

Wi-Fi & LAN

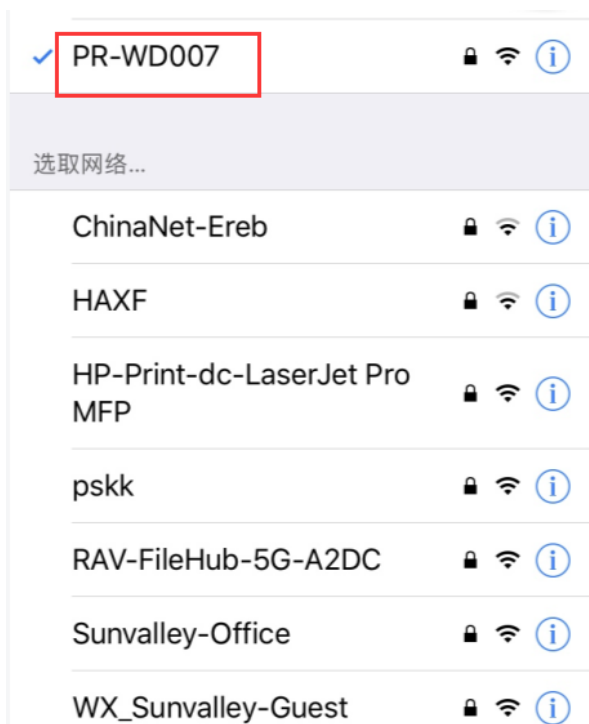

The screenshot shows the 'Wi-Fi & LAN' settings page on a device with IP address 10.10.10.254. The page has a blue header with 'Back' and 'Home' icons. The settings are as follows:

Setting	Value
Hide SSID	ON
SSID	RAV-FileHub-2G-6384
Mode	802.11b/g/n
Password	••••••••
MAC Address	00:1C:C2:35:63:84
IP Address	10.10.10.254
Subnet Mask	255.255.255.0
Region	United States

2. Enter your new SSID name and password. Click **Save**

- 3.
4. After changing the SSID and Password, your phone will lose the connection to your FileHub. You have to reconnect your phone to FileHub

ChinaNet-Ereb	  
HAXF	  
HP-Print-dc-LaserJet Pro MFP	  
PR-WD007	  
pskk	  
Sunvalley-Office	  
WX_Sunvalley-Guest	  

 If you only changed the password, the FileHub will lose the connection to your phone as well. And you have to click the FileHub SSID to **Forget Network** then reconnect to FileHub, because generally your phone can store the connected WiFi.

Example:

If you only change the password for **6D22**, FileHub loses the connection to your phone.

Go back to the WiFi setting on the phone. The phone fails to connect to the FileHub, because it remembers the last password. Every phone has a

different button to **Forget Network**. Then reconnect it with new password

Mac Address

This is the **Mac address** of FileHub **LAN** itself. If your home router has a Mac filtering, please add the FileHub MAC address to the white list of your router. Or your FileHub will reject to connect to your home router.

When FileHub connects to your router **wirelessly**, please add the **listed MAC** address to the white list. E.g. 00:1C:C2:11:6D:22

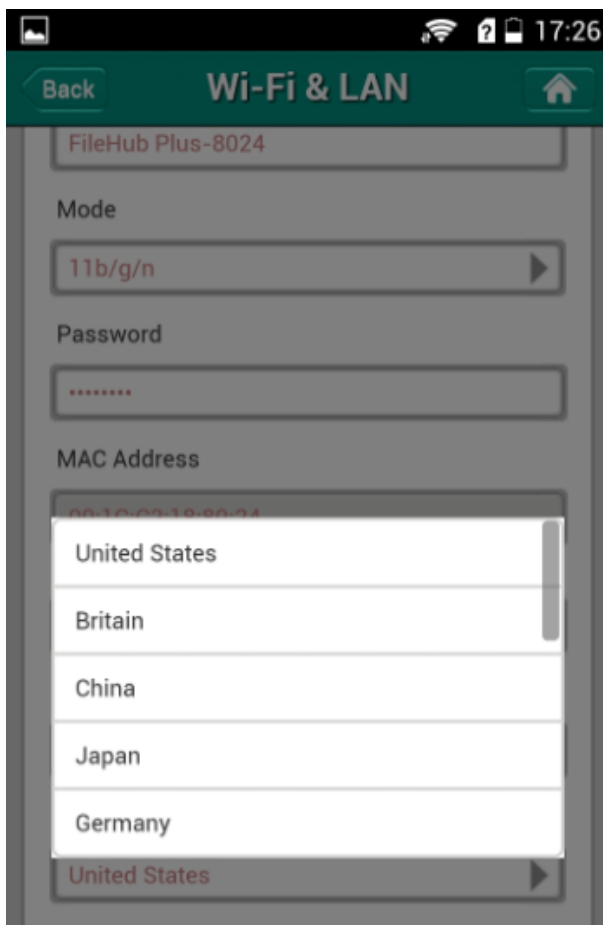

When FileHub connects to the router **by the line**, please add **“1”** to the end number, then add the changed MAC address to the white list. E.g. 00:1C:C2:11:6D:**23**

MAC Address

00:1C:C2:11:6D:22

Region & Wi-Fi Channel

You may manually set the **Region** and **Wi-Fi Channel**

And change the **Security** type (default: Mixed WPA/WPA2-PSK):

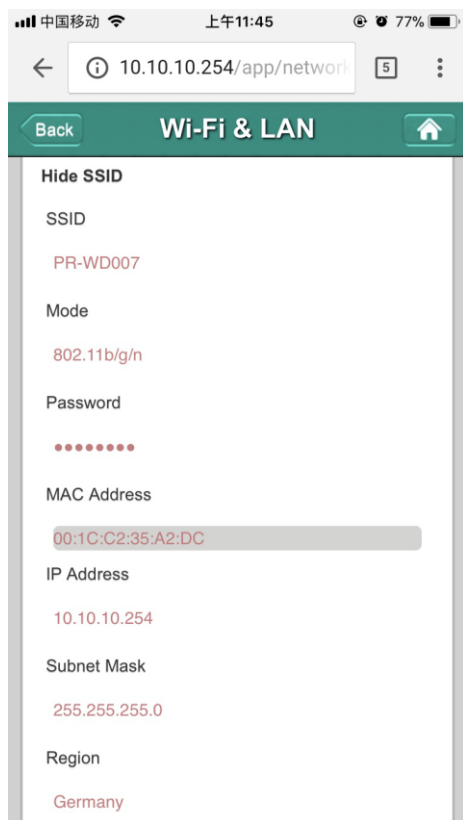

Hide SSID

Click

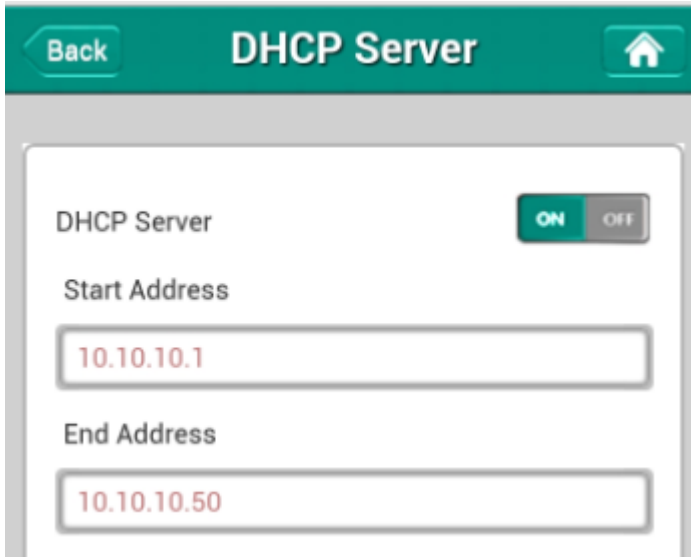

you may hide/unhide the SSID. If you hide the SSID, others cannot search your FileHub.

✎ If you would like to hide your SSID, please make sure you have set up the network setting (wired/wireless) previously, otherwise you will lose the connection to FileHub, and will need to reset the FileHub to restore the original settings.

DHCP Settings

Click  you may enable/disable the DHCP server.

Back DHCP Server

DHCP Server ☒ ON ☐ OFF

Start Address

10.10.10.1

End Address

10.10.10.50

 If you turn off the DHCP server, FileHub will **NOT** assign an IP address to your wireless device therefore making them unable to connect to the FileHub. The IP address from your wireless device needs to be inputted manually.

Towards the bottom of this page, you may view the **clients** connecting to your FileHub.

Service Settings

Click 10.10.10.254 → **Settings** → **Service Settings**

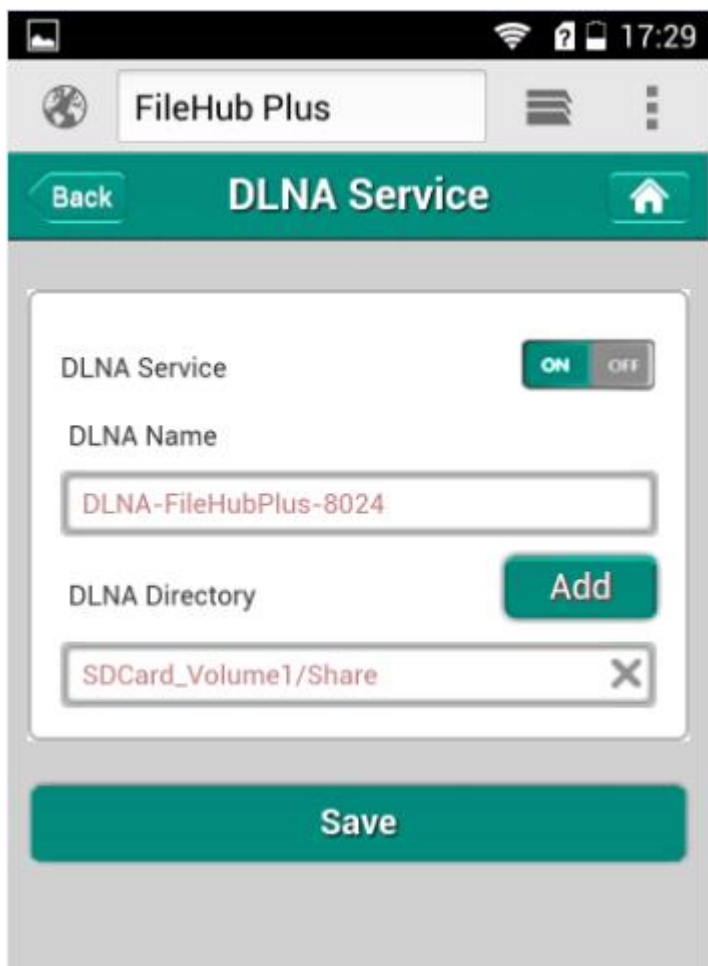

Samba Service

Provide shared services to files and printers for clients on the Microsoft Windows Network and Unix-Like Network. Default status is **ON**.

DLNA Service

FileHub also supports DLNA service (if you need to change the settings of DLNA, a USB storage device should be attached to the FileHub):

The default name: DLNA-FileHub-XXXX

Default directory: WiFiDisk1_Volume1/Media Directory Server

Example: DLNA Name changed to **6D22** and the directory changed to **June**.

Switch **DLAN Service** to ON, then click **Add**.

FileHub Plus

Back DLNA Service

DLNA Service **ON** OFF

DLNA Name

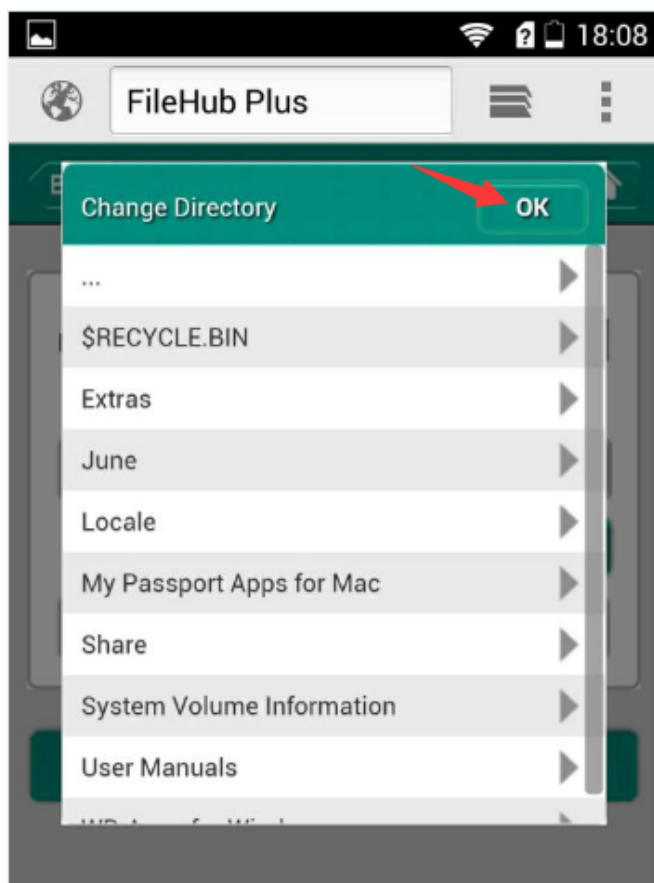

DLNA-FileHubPlus-8024

DLNA Directory Add

UsbDisk2_Volume1/June X

Save

Tap on the folder and click **OK** to change the directory.

The image shows a mobile application interface for configuring a DLNA service. At the top, there is a teal header bar with a 'Back' button on the left, the title 'DLNA Service' in the center, and a home icon on the right. Below the header, the main content area is white with a light gray border. It contains three sections: 1. 'DLNA Service' with a toggle switch currently set to 'ON'. 2. 'DLNA Name' with a text input field containing 'DLNA-FileHubPlus-8024'. 3. 'DLNA Directory' with a text input field containing 'UsbDisk2_Volume1/June' and a red 'X' icon to its right. To the right of the 'DLNA Directory' input is a teal 'Add' button. At the bottom of the form is a large teal 'Save' button, which is pointed to by a red arrow.

Back DLNA Service

DLNA Service **ON** OFF

DLNA Name

DLNA-FileHubPlus-8024

DLNA Directory Add

UsbDisk2_Volume1/June X

Save

Now go back to the main page, the sections will show the contents of the folder that you set for the DLNA directory.

Firmware Upgrade

Here you can view the current version of the firmware of your FileHub.

From here you can upgrade the firmware.

To upgrade the firmware, please follow the steps below:

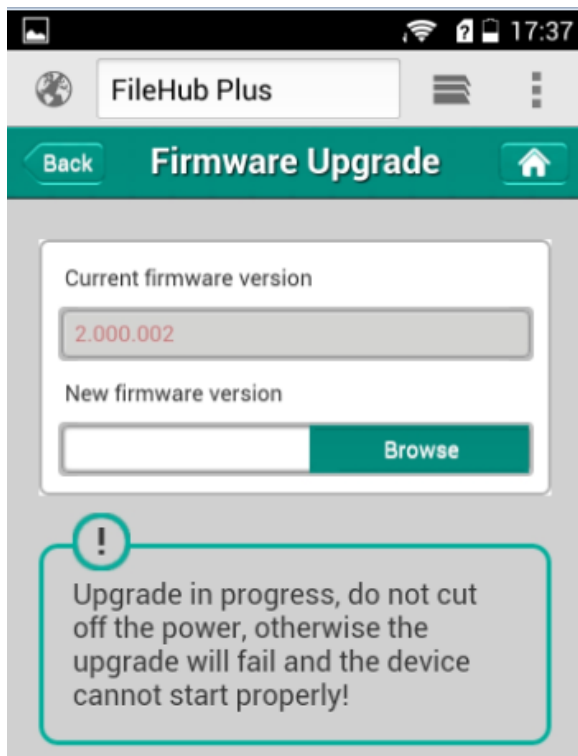

1. Download the firmware from the RAVPower website:
<https://www.ravpower.com/filehub-5G-wireless-travel-router-6700mah-portable-charger.html>

• For Firmware

Firmware 2.000.002.zip

2. Unzip it.
3. Insert a USB storage device into your FileHub (e.g an external hard drive or a USB flash drive).
4. Connect to the FileHub via wireless.
5. Open a browser and enter **10.10.10.254**.
6. **Settings** → **System Settings** → **Firmware Upgrade** → **Browse**, Browse and select the file.

7. Click **Firmware Upgrade**.

You will be prompted to wait 5 minutes while the system updates. After the system has updated, you will have successfully updated the firmware.

Factory Default

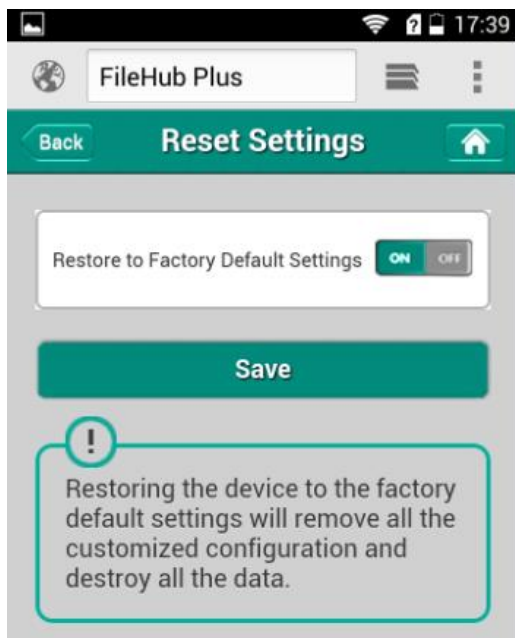

There are two ways to reset the FileHub:

1. Hard Reset:

Use a needle-like object to press the reset button found next to the USB port; hold for 10 seconds until the Wi-Fi indicator LED blinks, release it and wait for it to reboot.

2. Restore Factory Setting:

On the computer, click  to **Restore to Factory Default Settings** → **Save**, wait for it to reboot.

Please ensure your FileHub has at least 50% power left (2 blue LED lights) before resetting

This will reset all configuration settings to their default values.

The default SSID Name: FileHub-XXXX

The default SSID Password: 11111111(8 x 1's)

The default User Name: admin

The default Password: blank (leave it empty)

All changed settings will be restored to their factory default settings

Wizard

Click **Wizard**, you will be directed to step-by-step basic configuration guide.

[18](#) Guides you to set the FileHub up from beginning.

Battery Backup

FileHub RP-WD009 has an internal 6700 mAh battery, which you can use to charge your devices on the go.

Charging the FileHub

Start charging the FileHub when the remaining power is less than 25%. This will ensure your external charger is ready for emergency situations.

To charge the unit:

1. Connect the USB end of the USB cable to an AC adapter or any USB power source.
2. Connect the micro-USB end of the cable to the charging port of the FileHub.
3. The power indicators will blink during the charging sequence. Once the unit is fully charged, the blinking will stop and the indicators will remain lit until the cable is.

We recommend using a USB AC adapter with up to 1.0A output to charge the FileHub. Using a charger with an output higher than 1.0A may damage the internal battery.

Charge Devices

To charge your device:

1. Plug the USB end of the charging cable into one of the USB ports on the FileHub.
2. Connect the micro-USB end of the cable to your device.
3. After a few seconds, charging will start automatically.

- Please do not use the unit to charge the devices whose input current is not 5V.
- Some devices (e.g. iPhone, iPad etc) have a micro-USB port that is different from standard micro-USB ports. The USB cable provided will not be able to charge these devices. Please use the original cable supplied by your device manufacturer instead.

Caring for the FileHub

Storage

When the FileHub will not be used for an extended period, store it in a cool, dry area with the terminal cover in place. To care for your safety, do not store your FileHub in locations that:

- are poorly ventilated or subject to humidity of over 90%
- are exposed to temperatures above 60°C (140°F) or below –10°C (14°F)

Cleaning

When removing fingerprints and other stains, wipe the surface lightly with a soft cloth or chamois leather. Do not apply pressure, as this could result in scratches.

Caution

Do not drop: The product may malfunction if subjected to strong shocks or vibrations.

Keep dry: This product is not waterproof, and may malfunction if immersed in water or exposed to high levels of humidity.

Caring for the Battery

Observe the following precautions when using the FileHub:

- Do not expose the product to flame or excessive heat.
- Keep the charging ports clean.
- If the FileHub will not be used for some time, run it flat and store it in a location with an ambient temperature of 15°C to 25°C (59°F to 77°F; avoid hot or extremely cold locations). Repeat this process at least once every six months.
- Charging your device while charging the FileHub can result in the internal battery of the FileHub being damaged.
- Turning the FileHub on and off repeatedly when the battery is fully discharged will shorten battery life. Batteries that have been fully discharged must be charged before use.

Troubleshooting

If the FileHub fails to function as expected, check the list of common problems below before consulting a RAVPower representative.

Q: Why can't I connect to the FileHub after changing the SSID password?

A: Please forget the password of the FileHub on your phone  [80](#). If this doesn't work, please reset the FileHub for a try  [105](#).

Q: Why does the network speed decrease in the Bridge Mode?

A: This is because it uses the same radio/frequency (2.4GHz) to accept incoming and outgoing packets from clients as it does to forward those packets on to the next Wi-Fi router and accept replies. So effectively you get half the bandwidth, as each packet must go over the air twice - from the client to the FileHub, then from the FileHub to the Wi-Fi router. This is the industry standard with almost all routers with a bridge mode. For those who constantly use media streaming or real-time network gaming, we instead recommend AP Mode to expand the wireless network with less impact to peak performance.

Q: Why I can't get any Internet from the FileHub?

A: Please check if your FileHub is connected to a wired or wireless network  [31](#).

Please note that the FileHub can create its own LAN but without full

internet access.

Error Messages

Warranty and Support

This RAVPower RP-WD009 FileHub is covered with the RAVPower 12 month warranty from the date of its original purchase. If the RAVPower RP-WD009 FileHub becomes defective during its warranty period, please contact RAVPower or your seller for warranty cover. The following are not covered by our warranty:

- 2nd hand purchase or purchase from a non-authorized seller/distributor
- Damages resulted from abuse, fire, poison and moisture
- Damages resulted from natural disaster
- Product been dismantled

Successful product registration at www.RAVPower.com/productregistration will add an additional 6 month of warranty cover, making a total of 18 months warranty cover from the date of original purchase.

- Please do not return the product without contacting RAVPower first
- We can only provide warranty cover for products sold by a RAVPower authorized distributor

Contact

If you have any concerns and enquiries about RAVPower products and services, please contact RAVPower support team via any of the following methods.
