AI Causing Chaos

> So much AI turns out to be low-waged people in a call center in the Global South pretending to be robots that Indian techies have a joke about it: “AI stands for ‘absent Indian’” - Cory Doctorow

I am collecting examples of AI fails by people who either deliberately or naively mislead about the capabilities of AI.

2024

- **11/02/24 -** System set up to detect cheating students found 97% of students were cheating and UK officials just accepted this
- **09/02/24 -** Gemini LLM conflates unsafe in the C# memory management context with unsafe as in unethical.
- **05/02/24** - Using neural networks to generate images of fake ids for online verification
- **04/02/24** - via Yoav Goldberg - GEM using models to predict protected characteristics of job applicants when such information is not supplied
- **28/01/24** Dudesy Podcast claimed that they trained an AI to impersonate the late comedian George Carlin but Cory Doctorow and Simon Willison both call bullshit. IT stinks of the "We made an AI watch 100 hours of X..." meme that went round a few years ago.
- **20/1/24** DPD introduce a ChatGPT-powered bot which users jailbreak and get to swear and call DPD 'useless'

2023

- **20/12/23** Chevrolet integrated a ChatGPT-powered bot into their site but because there is no such thing as input sanitization for LLMS people used prompt injection attacks to make the bot agree to sell users cars for $1.
- **24/10/23** Cruise robo-taxi dragged a person 20ft along the floor and had their license to operate in San Francisco suspended.

- **17/01/23** it emerged that a 2016 demo of Tesla's self-driving capabilities was completely staged
