

LaTeX

LaTeX is a powerful typesetting system that renders books and has specific markup for mathematics

- [Angle Brackets \(Greater Than, Less Than\) show as upside down question and exclamation marks](#)

Angle Brackets (Greater Than, Less Than) show as upside down question and exclamation marks

This is an issue when `<>` render incorrectly, it can look very weird.

Check your encoding

According to [this post](#) ([mirror](#)), it could be as simple as not using the correct encoding and can be remedied with the correct package being included in the document:

```
\usepackage[T1]{fontenc}
```
