

LaTeX

LaTeX is a powerful typesetting system that renders books and has specific markup for mathematics

- Angle Brackets (Greater Than, Less Than) show as upside down question and exclamation marks

Angle Brackets (Greater Than, Less Than) show as upside down question and exclamation marks

This is an issue when `<>` render incorrectly, it can look very weird.

Check your encoding

According to [this post](#) ([mirror](#)), it could be as simple as not using the correct encoding and can be remedied with the correct package being included in the document:

```
\usepackage[T1]{fontenc}
```
