

BulletTrain - Handwritten BuJo Companion App

Building the App

It's a mobile app powered by react native. I'm collecting my thoughts on how to build stuff with react native [here](#)

Storage

Books can be synced to/from remote storage systems. I will target webdav first because that's my personal itch but I guess theoretically I could also allow syncing with Google, Dropbox and maybe even something like S3.

Handwriting Recognition

Looks like [CRAFT](#) + [TrOCR](#) is likely to yield the kind of thing we want for recognising handwriting
