

Caddy Handler

You can set up caddy to do different things depending on the prefix using [handle](#) directive

```
testsite.com {  
  handle_path /media* {  
    root * /path/to/media  
    file_server  
  }  
  
  handle {  
    root * /path/to/normal/content  
    file_server  
  }  
}
```
